

WHAT IS CLAIMED IS:

1. A swab for removal of water inside the ears integrally comprising:
a long conical shape, which is wholly made of high water-absorbing material;
one end being a thick handle part which has appropriate solidity, the other end
5 being a thin pointed part which is very soft and supple;
wherein the thick handle part is adequately solid to grip with fingers and as it
goes to the thin pointed part, it becomes gradually soft and supple.
2. The swab, as defined in claim 1, made of rolled fanwise tissue paper.
- 10 3. A rim of the tissue paper, as defined in claim 1 and 2, partly coated with
adhesive to prevent unfastening or unraveling.
4. The swab, as defined in claim 1, comprised with high water-absorbing materials
15 such as compressed cotton, compressed pulp, etc.
